PITTSBURGH PLATE GLASS CO.

SOLE DISTRIBUTERS OF

CIPHER CODE

To facilitate business transactions a Telegraphic Code has been formulated, which is being used throughout this catalogue and which is protected by letters copyright.

As this catalogue is made up of three parts (Manufactured Paints, Painters' Sundries, and Glass), there will be a code table applying to each department.

CIPHER CODE FOR MANUFACTURED PAINTS

The cipher word for each article will be found printed in *italics* near or opposite the article. For code words not found there, please refer to the following table:

JOHN JOHNSON & CO.

PATTON'S FIRST OR HIGHEST GRADE

PATTON'S SUN-PROOF MASTER PAINTERS' FINISHING WHITE LEAD—*babble*

This cut is a fac-simile of the package

Patton's Sun-Proof Master Painters' Finishing White Lead is a paint in paste form, ready to be reduced for use with linseed oil.

The composition of Patton's White is printed on every can, and is strictly pure white lead and zinc oxide, both doubly ground in strictly pure linseed oil to impalpable fineness, with silica.

Theoretically and practically this is the most durable paint that can be made.

It is packed for shipment as follows:

In 1, 2, 3 and 5 lb. tin cans, 100 lbs. to the case, either assorted or any one sized can.

In tin cans, 8 12½-lb. tins per case.

In tin cans, 4 25-lb. tins per case.

In kegs, 12½, 25, 50, 100, and 250 lb. packages.

In kegs	per lb.	$0 08½
In 1 to 5 lb. cans	"	10
In 12½-lb. tins	"	09
In 25-lb. tins	"	08¾

This cut is a fac-simile of the package

PATTON'S MASTER PAINTERS' TINTING COLORS—*babe*

These colors are in direct connection with the Master Painters' Finishing White Lead. The tints are made by adding a certain quantity of the tinting colors to a quantity of Master Painters' Finishing White Lead. This is a new principle in the mixing of tinted paints, and one that is particularly adapted to the requirements of those who wish to mix the colors for themselves. There can be no mistake in the mixing, and the colors come exactly as you expect them. The tints are scientifically compounded to go with a definite quantity of the Master Painters' Finishing White Lead, and in this combination you get the best paint it is possible to make, for it is the Patton Paint, made in the Patton proportions, and is **unrivaled** for beauty, durability, and covering powers.

These tinting colors are wonderfully popular. With only five colors, some twenty stylish house shades can be made accurately. Any one can use them. **See directions on the color card,** which may be had upon application.

Tinting Colors, per can	for full size can,	$0 24

SOLID COLORS TO BE THINNED WITH LINSEED OIL ONLY

WHITE LEAD IN SMALL TIN CANS—*background*

Every paint dealer requires some lead in this shape. We have three brands of it. The **"Crown"** or **"American"** is usually sold, but some want the better grade which we brand **"Pure."**

This white lead is packed for shipment in—

1-lb. tins, 100 to the case.
2-lb. tins, 50 to the case.
3-lb. tins, 33 to the case.
5-lb. tins, 20 to the case.

Assorted cases contain—

20 1-lb. tins. 10 3-lb. tins.
10 2-lb. tins. 6 5-lb. tins.

Price per pound	1-lb. tins.	2-lb. tins.	3-lb. tins.	5-lb. tins.	Assorted.

"Crown" White Lead ——*backward*	08	07	07⅜	07¼	07½
"Pure" White Lead ——*backwoods*	09	08½	08⅜	08¼	08½

PATTON'S CREAM CITY WHITE LEAD—*bacon*

This "white lead" (so-called) has been before the trade for many years, and is next in quality to the Sun-Proof brand. It is made in the celebrated "Patton proportions" of lead, zinc, and unchangeable pigments, ground very fine in pure linseed oil.

Patton's Cream City Pure White is packed for shipment in 12½ and 25 lb. tin pails, in 12½, 25, 50, 100, 250, and 500 lb. kegs.

In kegs——per lb. $0 07½
In 25-lb. tins—— " 07¾
In 12½-lb. tins—— " 08

PATTON'S STRICTLY PURE WHITE LEAD—*bacteria*

Ground from old-process lead in the dry state with pure refined linseed oil to great fineness.

This is the best pure lead we can produce, and is warranted strictly pure. Of course no pure lead can be so durable as a lead combined with zinc and the right proportion of silica.

1, 2, 3, 5, 12½ and 25 lb. tins.

12½, 25, 50, 100 and 250 lb. kegs.

PRICES ON APPLICATION

ECLIPSE SILICA LEAD—*badge*

A remarkable lead, of great body, durability, and whiteness

Packed for shipment in 12½, 25, 50, 100 and 250 lb. kegs.

In kegs	per lb.	$0 07
In 1 to 5-lb. cans	"	08½
In 12½-lb. cans	"	07½
In 25-lb cans	"	07¼

TWO POPULAR BRANDS OF LEAD

"C. F. LAWSON & CO."—*badger*
"L. R. STRONG & CO."—*badinage*

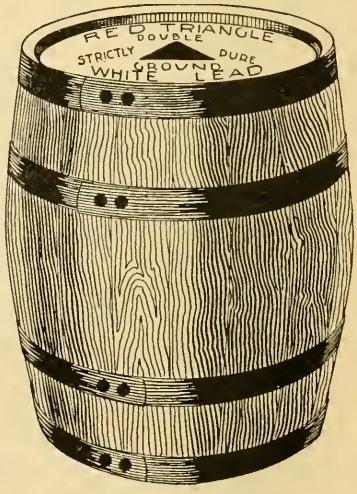

These leads are next in quality to the Cream City. A most satisfactory lead for a medium-priced line. A good paint and very durable.

These brands of lead are among the oldest on the market.

Packed for shipment eight 12½ and four 25-lb. tins per case; and in 12½, 25, 50, 100 and 250 lb. kegs.

In kegs	per lb.	$0 07
In 25-lb. tins	"	07¼
In 12½-lb. tins	"	07½

"RED TRIANGLE" WHITE LEAD—*badness*
"LE CLEDE" WHITE LEAD—*baffle*

These are low-priced goods of good wearing qualities. The body or opacity of this white is not so great as the higher-priced goods.

These leads are recommended to sell in competition with cheap leads and should be bought for that purpose.

Packed for shipment eight 12½ and four 25-lb. tins to the case; also 12½, 25, 50, 100 and 250 lb. kegs.

In kegs	per lb.	$0 05½
In 12½-lb. tins	"	06
In 25-lb tins	"	05¾

Put up under your own label, if you wish, in lots of 1,000 pounds or over.

We are jobbers of the various brands of National Lead Company's White Leads, such as Red Seal, Southern, Collier, Atlantic, Eckstein, etc. We are prepared to quote lowest market prices at all times.

PATTON'S B Z PRIMING LEAD—*bagasse*

FOR SASH AND DOORS

Uses up clean—no waste in sediment at the bottom of the package. The paint dries quick and hard.

The cost of this lead is much less than strictly pure lead, thus effecting a double saving.

This paint has been accepted after trial by some of the leading sash and door factories in the United States.

Use this primer and our putty. It will save money, and the putty will not fall off the sash.

In 100-lb. kegs	per lb. $0 07½	In 500-lb. kegs	per lb. $0 07½
In 250-lb. kegs	" 07½	In barrels about 1,000 lbs.	" 07¼

PATTON'S WHITE OCHRE—*baggage*

PARTICULARLY GOOD FOR FIRST OR PRIMING COAT

Patton's White Ochre is a natural filler, improved by the addition of durable and body-making pigments, which makes it of greater "body," more expensive, and unlike the "white ochres" usually sold. White Ochre produces more paint, ready for use, than any other white pigment, as 100 pounds makes 12 gallons of heavy paint.

Packed for shipment in eight 12½ and four 25-lb. tin pails per case; 12½, 25, 50, 100 and 250 lb. kegs.

In kegs	per lb. $0 06½
In tin pails	" 06¾

PATTON'S BEST STONE OR GRAY OCHRE — *bailiwick*

IN PASTE LIKE LEAD

This paint is made from durable material and ground very fine in pure linseed oil.

This first-class paint is made in five shades. Packed for shipment four 25-lb. tins per case, and also in 100 and 250 lb. kegs.

In 12½-lb. tins, 8 in a case----per lb. $0 07
In 25-lb. tins, 4 in a case----per lb. 06¾
In 100 and 250-lb. kegs----per lb. 06½

PATTON'S PUTTY—*bakery*

A large item in the cost of putty is labor. The larger the output the lower will be the percentage of cost for labor. The Pattons are probably

THE LARGEST MANUFACTURERS OF PUTTY

in the United States. This ought to insure the best value.

A specialty is made of putty for professional glaziers. Putty of any desired stiffness made for large buyers. Write us about "quick drying" putty.

OUR STANDARD—*bakshish*

MARSEILLES GREEN—*bannock*

OR PARIS GREEN SUBSTITUTE—GROUND IN OIL

This article is designed by the manufacturers as a substitute for Paris Green. In most respects it will be found preferable, being free from arsenic and non-poisonous. Has great body, durability, and brilliancy. Particularly adapted for painting window blinds and common purposes. Its covering power unsurpassed by any other green, an equal weight of it covering four or five times as much surface as Paris Green, thereby reducing cost of labor and stock.

PATTON'S PAINT CAN PRESS—*baton*

FOR COACH COLORS

This cut represents Patton's Paint Can Press for coach colors. As may be seen, this is a substantial machine and a necessity in every carriage paint shop.

We make no charge for this Paint Press when ordered with at least 50 lbs. of Patton's Genuine Coach Colors. If the Press is ordered without coach colors, the price is $1.50.

ROUGH STUFF—*bathos*

TO FILL CARRIAGE BODIES

In 1 gal. cans	per gal.	$4 00
In ½ gal. cans	"	4 25
In ¼ gal. cans	"	4 50

MIRROR PAINT—*cassowary*

This paint is being made for some of the leading mirror makers. There is nothing in the paint to injure the silver on the plate. The practical experience of years proves this statement.

In 10 and 25 lb. tins	per lb.	$0 20

PATTON'S SUN-PROOF LIQUID OR READY-MIXED PAINTS — *cabal*

A PAINT MADE OF THE MOST DURABLE INGREDIENTS

Mixed thoroughly on scientific principles and by improved machinery. Guaranteed a perfectly pure linseed oil paint. The pigment base is lead, zinc and a small percentage of silica, being practically the same as Sun-Proof M. & F. White Lead, only in liquid form.

This is the most durable paint manufactured.

IVOROID MIXED BARN PAINTS—*canker*

Are exceptionally good cheap paints. See Price List and Color Card for full particulars.

BARREL REVOLVER—*cannel*

This cut shows what every dealer needs. For this purpose we have plates to fasten on the heads of a barrel of mixed paint. To one of the plates a crank is attached, and with a pair of cheap "horses" rigs out a first-class paint agitator. No charge for these plates and crank when ordering a barrel of mixed paints.

Without such order, $1.00.

PATTON'S PRINCESS GUARANTEED FLOOR PAINTS—*canny*

This brand of Patton's Floor Paint does not compete in price with many other makes, because the makers have used the best materials obtainable for this purpose, which brings the manufacturer's cost above the ordinary level.

These floor paints, when used on a dry, clean surface, will dry quickly and as hard as flint.

In 1-gal. cans	"	5 75

PATTON'S BLACKBOARD SLATING—*cassoon*

This is an alcohol slating, and much more durable than the cheap benzine mixtures.

Patton's slating is made in the black and also with the green shade, known as "Green Slating," although the predominating color effect is black. This "Green" is now most popular.

In 1-gal. cans	per gal.	$4 00
In ½ "	"	4 10
In ¼ "	"	4 20

PATTON'S STEEL COLOR—*cast*

A paint for iron and machinery; to be thinned for use with benzine, thus making the cheapest of paints; a quick dryer and a practical article in every way.

Packed four 25-lb. tin pails per case, and 100, 250 and 500 lb. kegs; also in barrels.

Made in three colors.

Steel Color, 25-lb tins, 4 in a case	per lb.	$0 07
In kegs and barrels	"	06¾

PATTON'S IRON FILLER—*castanet*

Iron filler is used to fill air-holes, etc., in castings, and is of the greatest value. This filler dries quickly and as hard as the iron itself, which it resembles in color. In a short time after being used, Iron Filler can be chiseled like the actual metal.

Iron Filler also makes a good paint, and as a paint should be thinned with benzine.

Packed four 25-lb. tin pails per case and in 100, 250 and 500 lb. kegs; also in barrels.

Iron Filler, 25-lb. tins, 4 in a case	per lb.	$0 07
In kegs and barrels	"	06¾

JAMES' IRON FILLER—*castano*

This is next to the best grade.

25-lb. tins, 4 in a case	per lb. $0 06
Kegs and bbls.	" 05¾

PATTON'S SUN-PROOF GRAPHITE PAINT—*castor*

CONTAINING A SMALL PERCENTAGE OF SILICA

Experience has demonstrated that no paint excels Graphite for durability, where it can be used. Its color, a slate, prevents its use except for roofs, bridges, etc. There are other colors offered as "graphite paint," but if the color is materially different from the natural graphite color, then so much foreign matter has been added as to destroy its real value.

Graphite, being a form of carbon, cannot be affected by acid, alkali, gas, or any solution known to chemists. It has remarkable fire-proofing properties, and has been subjected for months to acids, alkalies, water, brine, and sulphur fumes, withstanding them all. It will cover much more surface than metallic oxide—one gallon of this paint, when mixed ready for use, covering from six to seven hundred feet of iron surface.

Roof painting is a subject that does not receive the attention it should, and often a good iron or tin roof is ruined for the lack of paint, when ten years might be added to its life at a very small expense. The life of a metal roof is good paint, and it is therefore very essential that good material should be used.

Some "graphite paints" on the market contain no graphite whatever.

Patton's Sun-Proof Graphite Paint is the best it is possible to manufacture. There is but little difference in price between Patton's and the other kind.

Put up in the following sized packages:

Mahogany	*caul*	Ebony	*causal*

PATTON'S PASTE WOOD FILLER—*causeway*

Not many years ago wood fillers were largely composed of starch and other vegetable products. A bright Yankee conceived of the idea of a mineral filler chiefly composed of quartz and secured a patent on his mixture. The patent expired several years ago, which makes the improvement public property. It is needless to add that Patton's Filler is based on quartz.

TOR-ON

SHINGLE OIL STAIN

is composed of Patton's Perfect Shingle Preservative and Patton's Shingle-Stain Colors.

In this shingle stain we offer the trade an entirely new system of shingle staining or tinting. Briefly, it is based on the principle which we employ in our Master Painters' Tinting Colors.

A certain quantity of the Paste Shingle Stain is mixed with another definite quantity of our Tor-On Shingle Oil, and this combination produces just what you want in the way of a liquid shingle staining or tinting mixture which is perfectly adapted for the work it is required to do.

It has taken long experience in the manufacture of shingle stains and a very definite knowledge of the needs of the trade and some very ingenious planning to bring out this new method of saving time, trouble, and money both to the trade and to those who do the work of painting and staining.

The value of Patton's scheme will be apparent at a glance. The dealer, instead of buying a dozen barrels of different colors of shingle stain, simply buys one of our steel drums filled with Patton's Tor-On Shingle Oil and with it an outfit of the various tints in paste form of Patton's Shingle Oil Colors. The shingle oil in the steel barrel can not evaporate and the paste shingle colors can not deteriorate.

According to the old method the dealer had to buy large quantities of liquid in which the stain was already mixed. This necessitated his keeping in stock more than he could expect to sell for a long time. Part of it evaporated and the rest of it settled to the bottom, and the colors lost their luster and tinting power by standing in the liquid.

According to our plan you have to buy only the one barrel, which is made of steel, and from which the shingle oil can not evaporate, and you buy the shingle colors in paste form, ready ground, in cans in which the colors can not deteriorate, and when a customer desires a certain amount of liquid shingle stain, there is nothing to do but to measure out the quantity of shingle oil needed for the number of feet to be covered, and to take down from the shelf the cans of shingle colors that are needed for the tint and strength of color desired. The customer takes them home and mixes them when he is ready to apply the shingle stain. You are left with clean hands and a clear conscience—clean hands, because you have not had to stir up the settlings from the bottom of a dirty barrel; a clear conscience, because you have given your customer a fair deal and have done him a favor, and you have made a fair profit on the goods you have sold.

Tor-On Shingle Stain is the perfection of a liquid shingle stain. This perfect Shingle Oil is the best solvent it is possible to make for the colors. The Paste Shingle Colors are the perfection of shades requisite to artistic house decoration. They are in just the same condition when they reach you as when they leave the factory, because they are sealed hermetically in air-tight cans, and can not spoil by the air or dust or by too long standing in the liquid, which is only intended to hold them for spreading.

These Paste Shingle Colors are put up in cans of three sizes, a small can which contains the proper amount of color to tint one gallon of the Tor-On Shingle Oil, a large can to tint five gallons, and a still larger can to tint ten gallons of Shingle Oil.

The trade-mark name of **Tor-On,** if spelled backward, gives a good definition of the reason for the name, and simply states the fact about Tor-On Shingle Stain which makes it so valuable an agent in the preservation of shingles. There is **no rot** about the shingles which have been treated with Tor-On Shingle Stain. You will double the life of your shingles by staining them with Tor-On Shingle Stain. It acts as a **preservative** from **rot** as well as being a most artistic finish in the making of **beautiful homes.**

PATTON'S LIQUID FLOOR POLISH—*celt*

Liquid Floor Polish is invaluable for hardwood floors, making them look like new.

Not much more labor to use this polish than washing the floor.

Put up in the following size packages:

Pint cans	each	$0 50
Quart cans	"	90
Half-gallon cans	"	1 70
Gallon cans	"	3 30
Five-gallon cans	per gal.	3 20

SEVENTEENTH CENTURY FLOOR WAX—*cement*

The use of floor wax is increasing, owing to the desirability of hardwood for floors. No paint stock is complete nowadays without a small stock of floor wax.

Packed in 1, 2, 4 and 8 lb. tins ---------- per lb. $0 75

DIRECTIONS

For new floors, first fill the wood with paste wood filler, clean off surface with rough cloth or excelsior, and allow to stand until filler is thoroughly dry. Then put on a coat of polish with a rag or brush and allow to stand about half an hour. Then take a weighted brush with long handle and rub across the grain first and with the grain afterward. To obtain a high gloss, apply second coat in same way, and finish by placing a piece of dry, soft cloth or piece of carpet under the brush and go over floor again.

To illustrate: Suppose you wish to telegraph for one dozen 3-inch O. K. Queen Wall Brushes, to be shipped by express, you would wire:

Pittsburgh Plate Glass Co., Chicago, Ill.—*Fable, fagot, fillet, gaff.*
[Sign your name here.]

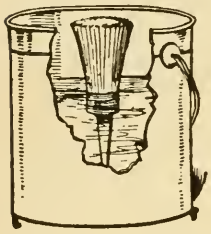

This enables our customers to telegraph orders with little expense. Some code words describe both the kind of goods and the size of package. In such case you would refer to this table for the code word for the amount or quantity wanted.

THE USE OF BRUSHES

(FROM THE WESTERN PAINTER, CHICAGO)

Too much cannot be said in regard to the use and care of brushes. We have seen many persons who were good painters, but who did not seem to understand anything about taking care of their tools.

Cold, dry winters are especially severe on brushes, which are usually kept in buildings that are heated by steam, furnaces or other dry heat. A brush should never be condemned because it contains a few loose hairs. A good and careful workman will get these out before he puts his brush into use. A little thoughtfulness on the part of foremen in shops will save a large amount of trouble, and many a brush that is hastily condemned would prove a good one.

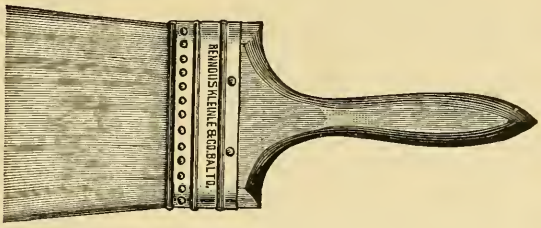

Swelling a new brush is a very important item in the future usefulness of that tool. Under no circumstances should a new brush (paint or varnish, round or oval) be put in water to swell with the bristles down, for water-soaked bristles will always work flabby, and if the bristles are of a fine quality, they will nearly always twist. The handles are usually driven into round and oval brushes. As the wood and bristles both shrink when the brushes are kept in a warm, dry place, it is advisable to swell these brushes before using them. Be careful, though, to put your brushes in the water with the handle down, as shown in the accompanying illustration, letting the water come just to the point where the bristles emerge from the binding. This will swell the handle without soaking the elasticity out of the bristles and without making them flabby.

Keep brushes in a cool or damp spot, and as near the floor as possible. Exposures to heat will sometimes cause the wood to shrink and the best brush to shed bristles.

WHITEWASH BRUSHES should never be put in hot or newly slacked lime, or lime with acids in it, as this burns the bristle and causes it to lose its vitality, and makes the ends break off.

Dealers should acquaint their customers with these facts, and when complaints are made, inquire whether the above directions have been observed.

FLAT WALL BRUSHES

PATTON'S SUN-PROOF BRAND FINE CARRIAGE VARNISHES

(All Varnish Prices include the Package)

FINISHING

Per Gal. in Sealed Cans

Imperial Wearing Body Varnish—*iambic*—(for finishing coats, best work) ---- $4 00

A pale varnish of great brilliancy and durability, for finishing coat only. It works with great freedom, dries out of dust inside twelve hours, and hardens in two to three days. One coat is sufficient over our Imperial Rubbing Body Varnish.

Imperial Medium Drying Body Varnish—*iambus*—(for finishing coats)-------- 3 75

This varnish dries out of the way of dust in eight or ten hours, and is the same as the Wearing Body, with the single exception of hardening more quickly.

Imperial Finishing Gear Varnish—*ibex*—(for finishing running parts)--------- 3 50

This varnish dries quicker than the Wearing Body or Medium Drying Body, and finishes with a very full lustre, drying out of the way of dust in six to eight hours.

Heavy Gear Varnish—*ibid*—(one coat finishing for general work)---------- 3 00

It is heavier in body than the Finishing Gear, though not so pale nor so durable; but being heavier body is especially adapted for finishing carriage parts where a single coat is needed.

Elastic Gear Varnish—*ibedem* ---------- 2 75

A peculiarly elastic and satisfactory varnish.

No. 1 Gear Varnish—*ibis*—(quick drying finishing for ordinary work)-------- 2 50

Similar to our Heavy Gear Varnish in body and working qualities, but is intended for a cheaper class of work or repairs. Heavy body, quick drying, and durable.

VARNISHES—Continued

RUBBING

Per gal.

Imperial Rubbing Body Varnish—*icarian*—(a four-day rubbing varnish)..... $3 50

A slow rubbing varnish, to be used in obtaining a surface on work where the greatest durability is wanted, and where sufficient time and care can be given. It is pale and free working, and can be rubbed in four days.

Medium Rubbing Varnish—*ice*—(a three-day rubbing varnish)..... 3 25

This is a medium between the Rubbing Body and Quick Rubbing Varnishes. It hardens so as to rub well in three days, and is sufficiently pale for any light colors.

Quick Rubbing Varnish—*ichor*—(a two-day rubbing varnish)..... 3 00

This is similar to our Medium Rubbing, but can be rubbed closely without sweating in from one to two days. Designed for hurried work, or where a very hard surface is desired.

No. 1 Rubbing Varnish—*ichorus*—(a quick rubbing for ordinary work)..... 2 50

This is especially adapted for cheap work or repairs. Heavy in body and drying, to rub, in twenty-four hours.

Quick Black Rubbing Varnish—*ichty*—(for under coats, ordinary work)..... 3 00

Imperial Special Black Rubbing—*icicle*—(solid covering)..... 3 50

Similar to Black Rubbing, but being denser in color will cover one coat over anything; useful for new or old work.

Imperial Special Green Rubbing—*iciness*—(solid covering)..... 3 75

Similar to the Special Black Rubbing, but is of a Brewster green shade.

MISCELLANEOUS

PATTON'S SUN-PROOF BRANDS

Per gal.

Japan Gold Size—*icing*—(for binding and drying colors)..... $3 00

This is a superior oil-dryer, used for mixing with light paints to aid their drying. Is a strong binder, pale in color, and desirable as a quick size for gilding.

FINISHING VARNISHES

	In 1-gal. Sealed Cans
Standard Finest Durable Body Varnish—*imbed*	$6 00
For the final coats on carriage bodies where greatest durability is required.	
Standard Medium Body Varnish—*imbellic*	6 00
For finishing coats on carriage bodies where great durability is required. Is somewhat heavier in body and quicker drying than our Finest Durable Body.	
Standard Special Body Finishing Varnish—*imbibe*	5 00
Especially intended for finishing a class of work requiring a heavier and quicker drying finishing varnish than our Medium Body. Is easy working, safe, brilliant and durable.	
Standard Wearing Body Varnish—*imbiber*	4 00
For finishing coats on carriage bodies. Not as pale as our Special Body Finishing. Is easy working, safe and durable.	
Standard Finest Durable Gear Varnish—*imbody*	5 00
For the final coats on wheels and underparts where greatest durability is required.	
Standard One Coat Coach Varnish—*imboil*	4 50
Intended for finishing wheels and underparts of carriages, also bodies, where a heavy varnish is required. Combines easy-working qualities with safety, brilliancy and durability.	
Standard Heavy Gear Varnish—*imbolden*	3 75
Intended for finishing wheels and underparts of carriages. Is heavier and quicker drying than our One-Coat Coach Varnish; works freely under the brush, is brilliant and durable.	
Standard Hard Drying Gear Varnish—*imbosk*	3 00
A heavy, quick-drying Gear Finishing Varnish.	
Standard No. 1 Carriage Varnish—*imbow*	3 50
A heavy, quick-drying varnish for finishing wheels and underparts; is quite durable.	

VARNISHES—Continued

In 1-gal. Sealed Cans

Standard Pale No. 1 Wagon Varnish—*imbox* $2 50

For finishing wagons and ordinary work. Also adapted for general repairing purposes and for mixing with colors.

Standard Durable Coach Varnish—*imboxing* 2 00

For finishing wagons and ordinary repair work

RUBBING VARNISHES

Standard Rubbing Body Varnish—*imbrue* 4 50

Intended for undercoats on finest class of work where sufficient time for hardening can be given. Dries sufficiently hard inside of four days to admit of being rubbed without sweating.

Standard Pale Quick Rubbing Varnish—*imbrute* 4 00

Intended for undercoats on finest class of work where our Pale Rubbing Body Varnish is too slow drying. Hardens sufficiently inside of two days to admit of being rubbed without sweating.

Standard No. 1 Quick Rubbing Varnish—*imbuing* 3 50

Is intended for the same purpose as our Pale Quick Rubbing Varnish, but is somewhat darker. Hardens sufficiently inside of two days to admit of being rubbed without sweating.

Standard Carriage Rubbing Varnish—*imburse* 3 00

For undercoats on carriage bodies requiring a quick rubbing varnish.

Standard Black Rubbing Varnish—*imitable* 4 00

Is a very reliable article. Dries sufficiently hard inside of two days to admit of being rubbed without sweating.

BERRY BROS.' VARNISHES

HARD OIL FINISH

Cans are handsomely labeled, full directions accompany each, and are securely packed in cases of twelve 1-gallon cans or two 5-gallon cans.

	5-Gallon Cans, per Gal.	1-Gallon Cans, per Gal.	½-Gallon Cans, per Gal.	¼-Gallon Cans, per Gal.	⅛-Gallon Cans, per Gal.	$\frac{1}{16}$-Gallon Cans, per Gal.
White Hard Oil Finish—*imitate*	$2 65	$2 75	$2 80	$2 85	$2 95	$3 25
Light " " " —*imitated*	1 50	1 60	1 65	1 70	1 80	2 10
Walnut " " " —*imitator*	1 40	1 50	1 55	1 60	1 70	2 00

ELASTIC OUTSIDE FINISH—*immask*

5-gallon cans	per gal. $5 40	¼-gallon cans	per gal. $5 75
1-gallon cans	" 5 50	⅛-gallon cans	" 6 00
½-gallon cans	" 5 65	$\frac{1}{16}$-gallon cans	" 6 30

The above is made expressly for durability under exposure to the weather, and is unequaled for front doors, store fronts, etc. It not only possesses unusual wearing properties, but dries quickly out of the way of dust—a very important feature in an outside varnish, and one which every painter fully appreciates.

VARNISHES—Continued

ELASTIC INTERIOR FINISH—*immense*

5-gallon cans	per gal.	$2 50	¼-gallon cans	per gal.	$2 85
1-gallon cans	"	2 60	⅛-gallon cans	"	3 10
½-gallon cans	"	2 75	$\frac{1}{16}$-gallon cans	"	3 40

For all interior woodwork where the exposure is unusually severe, such as window sash and sills, inside blinds, bath-rooms, etc., Elastic Interior Finish can be recommended with the utmost confidence. It will resist the action of hot water, soap, etc., longer than any other "Finish" we know of, and is without doubt the best article of the kind ever introduced.

LIQUID GRANITE—*immerge*

5-gallon cans	per gal.	$2 50	¼-gallon cans	per gal.	$2 85
1-gallon cans	"	2 60	⅛-gallon cans	"	3 10
½-gallon cans	"	2 75	$\frac{1}{16}$-gallon cans	"	3 40

This is without doubt the best Floor Finish made, both in point of appearance and durability of finish.

Being transparent it will not obscure the grain of the wood, but will develop its beauty and preserve it.

It is made in two grades, A and B, the former being heavy in body and suitable for use on new floors, and the latter more limpid and intended for refinishing or restoring old floors.

It is also the best finish in the market for oilcloth and linoleum, prolonging their life and enhancing the brightness of the colors.

SPRAMOTOR JR. PAINTING MACHINE—*leather*

This outfit is complete in every respect, and with it any kind of work can be done that can be accomplished with one nozzle. When attached to our patent five-gallon can, it is a most portable device; can be carried about by one hand, or by means of the handles provided. The can has a raised bottom, and heavy flanged rim, on which the can rests. Our patent catches allow the lid to be instantly removed. It effectually prevents any splashing, and a lady can use the apparatus at any class of work, or with any kind of mixture, and not soil her dress.

The can may be refilled (without removing the Spramotor) through the handhole provided with cover for that purpose. As all the work of operation is done on the down stroke, there is no tendency to lift the can in raising the handle of the motor. The stroke of the Spramotor Jr. is 4 inches, and the diameter of the plunger is 1⅜ inches, and a vapor or spray can be developed easily with one nozzle. Can be operated with one or two people. This outfit has brass agitator, painting nozzle, patent shut-off.

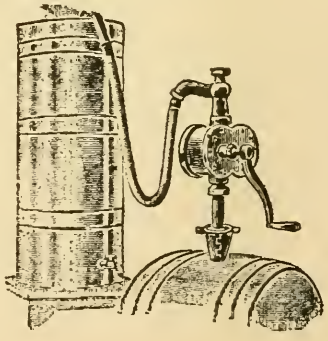

Complete, fitted with 8-ft. iron extension pipe and 10 feet of hose---------- $18 00
Same with bamboo extension pipe, extra---------- 1 60

ROTARY BARREL FORCE PUMP—*leatly*

These pumps are arranged with an improvement for holding the suction pipe rigid in the bunghole of the barrel; any size of bung from 1½ to 4 inches in diameter.

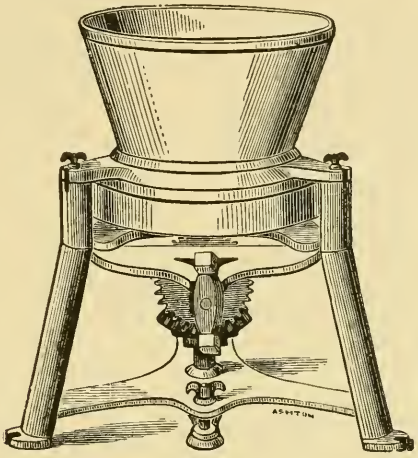

Price, complete----------$15 00

This includes pump with capacity of 10 gallons per 100 revolutions, 3 feet suction hose, hose coupling, hook and holder, but does not include hose.

PAINT MILLS

All of our Paint Mills have bright polished hoppers and steel scrapers, very easy to clean and are intended for practical use.

25 to 50 lbs.	"	20
Less quantity	"	24

DIRECTIONS FOR USE

Dissolve one and one-half (1½) pounds in one gallon of warm water; if found too strong, reduce with additional water. Apply with sponge or brush. Keep the surface wet with the liquor until paint is soft, when it can be removed with putty knife or scraper. Sponge off the surface with clear cold water. Acid or bleacher is not necessary. If the work is in a perpendicular position, dissolve as above and add enough lump lime to make a thick cream and keep from running down. The lime should always be fresh slacked.

OLD RELIABLE PAINT BURNER—*letter*

The Old Reliable Burner is carefully made from top to bottom, and is in every respect a first-class article. The material is first quality brass, highly polished. The construction is of the very best type, every part being made strong and substantial so as to stand hard usage without injury.

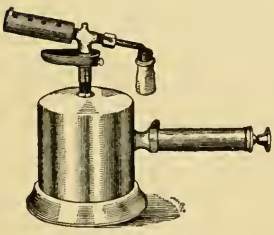

The burner is a powerful generator and combines the highest heat-producing qualities with economy of gasoline. The operation is simple and easy to understand, and there is nothing that is liable to injury or to get out of order.

Dimensions: Height, 9 inches; diameter, 4 inches; capacity, 1 quart; weight, 2¾ lbs.

Packed one in a box. One dozen, two dozen or three dozen in a case. Full directions with each torch.

Burner complete ---------- $5 00

THE KINZIE PAINT BURNER—*lettuce*

The Kinzie Burner is of the same general construction as the Old Reliable, and is adapted to the same kind of work, but is of a smaller size. The burner is smaller, and the tank is smaller. The amount or degree of heat generated by the Kinzie is about the same as the Old Reliable, but a little less in volume.

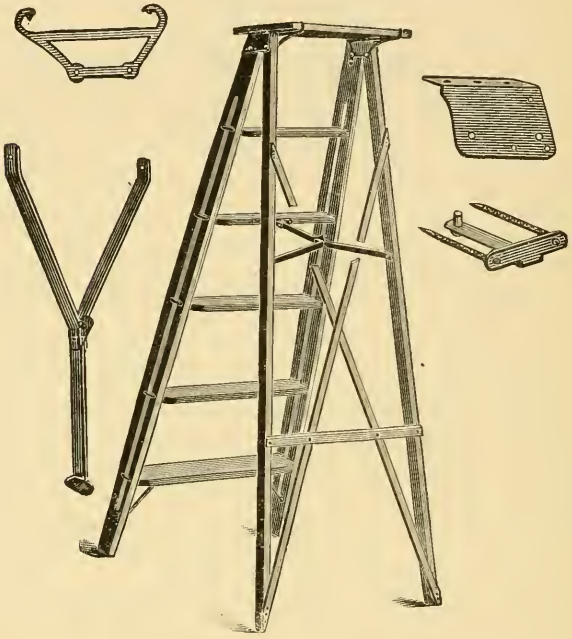

Dimensions: Height, 7 inches; diameter, 3½ inches; capacity, 1 pint; weight, 1½ lbs.

Packed one in a box.

T 60 The Kinzie Burner, complete ---------- $4 00

LADDERS

STEP-LADDERS

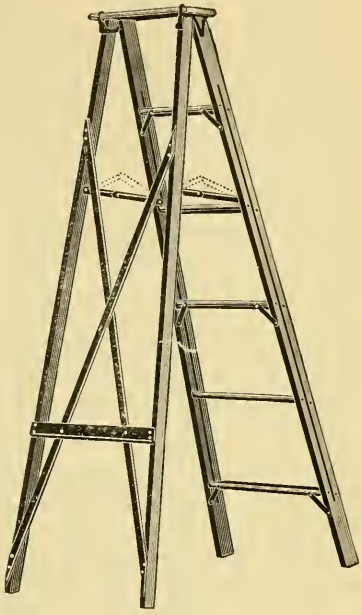

THE BEST—*levant*

(Patented)

Made from selected stock. Has iron brackets, steel ears, and anchor irons under each step, preventing sides from spreading. Has our improved leg brace, to prevent closing and spreading of the legs when in use. This is the best made and most durable ladder on the market. Made with and without bucket shelf.

Price, per foot----------$0 40

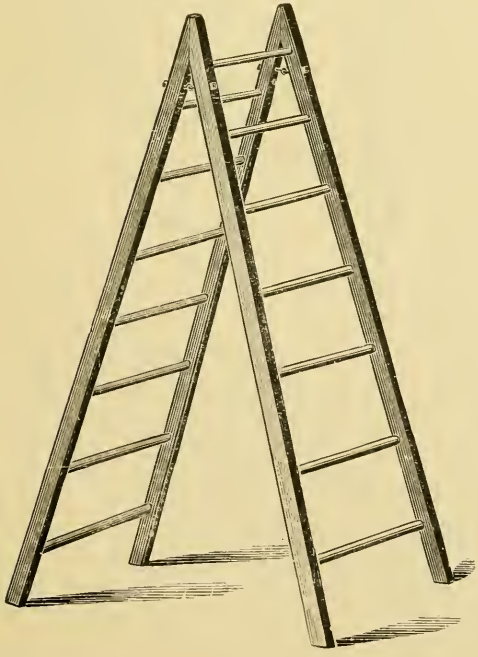

STEP-LADDERS

THE PRACTICAL—*levee*

An excellent moderate priced step-ladder. Made of selected stock. Has iron brackets, double-locking leg braces, and binding irons on front and back of every other step. Made with or without bucket shelf. This is a strong and durable ladder.

Price, per foot----------$0 30

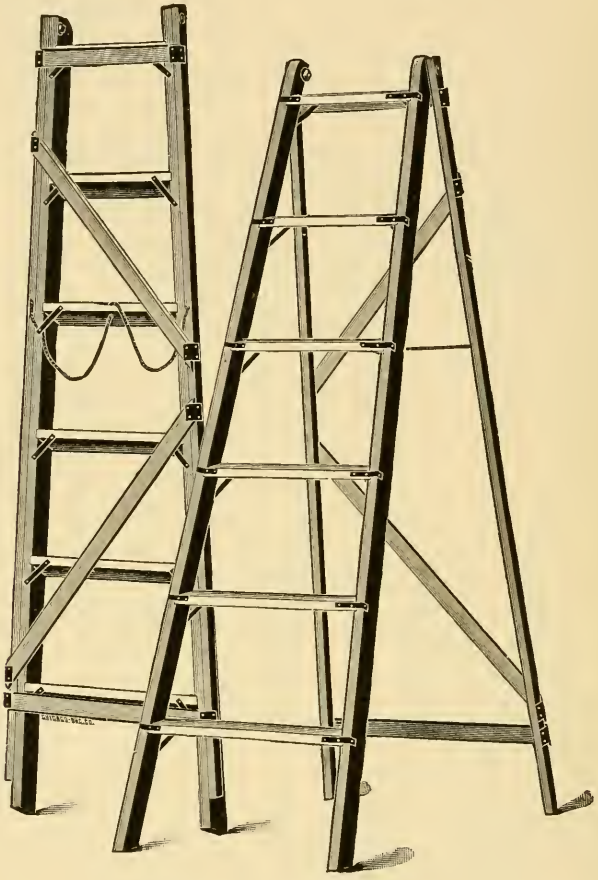

PAINTERS' TRESTLES

—level

Made in all sizes, of clear Norway pine and hickory rungs, and is hinged by heavy wrought iron eye-bolts. Very generally used by painters and decorators.

Price, per foot of height--------$0 40

LADDERS

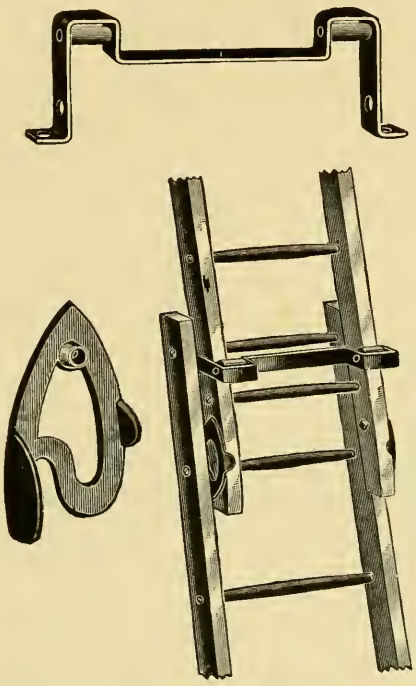

PAINTERS' FAVORITE—*lever*

This is the strongest painters' ladder made, and is a favorite with all. The legs fold close to sides. Iron straps on back and front of each step. Corner iron on braces and legs. Is made of selected lumber and is so braced that it cannot work loose or weaken at any place.

Price, per foot of height ---------- $0 50

LADDERS

EXTENSION LADDERS—*lend*

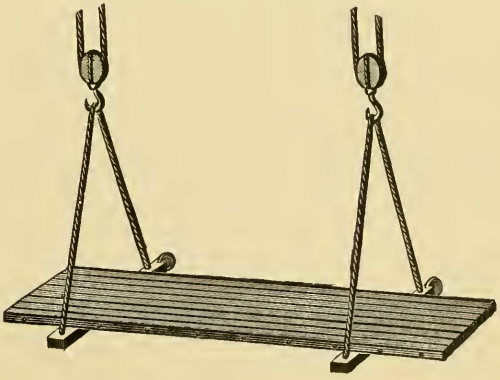

(Patented)

Made from selected and seasoned Norway pine with hickory rungs. Our new **double roller and single piece top iron** is much stronger than two single rollers and strengthens the ladder at its weakest point. Our hooks are malleable iron and are the strongest made.

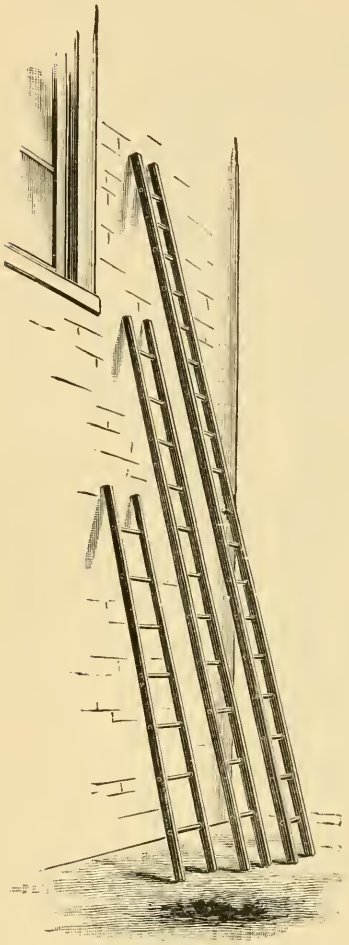

Price, per foot-----$0 21

PAINTERS' STAGE OR SCAFFOLD—*levite*

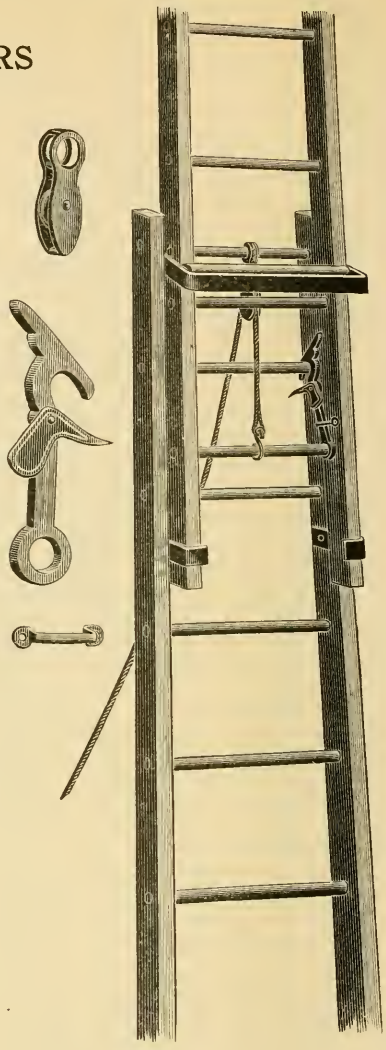

Made of best of Norway pine, extra heavy and strong, in any length or width. With stages we furnish, when desired: Cross bars and rollers, large cornice hooks, and complete manila rope outfits, in four parts, with ⅝-inch or ¾-inch blocks. Send us length of fall when writing for complete prices.

LADDERS

LONG LADDER

ROPE EXTENSION LADDER (Patented)

LONG LADDERS—*levity*

Made from the best of selected and seasoned pine, with hickory rungs well fastened to sides and countersunk. Made in any length.

Price, per foot ---------- $0 18

ROPE EXTENSION LADDER—*levy*

The top section can be raised or lowered by a crank and rope attachment. Has automatic locking hooks, and a very strong iron rung and crank combined. This is a very handy ladder, and a necessary one where long and heavy ladders are required.

Price, per foot ---------- $0 30

SPONGES

Genuine Sheep's-Wool Sponges—*liver* ---------- per lb. $3 00
4 to 6, 6 to 8 to pound and other sizes. The best Sponge for all purposes.
Velvet Sponges—*livery*. More open than the Yellow or Grass, but rather tougher than either ---------- per lb. 2 00
Yellow Sponges—*livid*. Closer texture than Velvet but hardly as tough - per lb. 1 75
Grass Sponges—*living*. A good sponge for the price; soft and elastic when wet ---------- 1 25

SPONGE POINTS

In this connection we desire to call attention generally of all who deal in and use sponges to two important points:

1. That as the sponge grows in water and is used wet, it should be offered for sale wet. Sponges when dry are hard, rough and easily torn; when wet, are soft and elastic and much less easily torn. The difference between fruit and fish, glue and gelatine in dried and soaked state applies to sponges. It can be therefore readily conceived that it is to the interest of the dealer to offer the sponges for sale wet.

2. Please note: The strongest sponge is easily torn by pulling across the grain. The fair test is with the grain. Everything has a grain. Wooden columns support buildings because with or along the grain, but wood across the grain can be easily broken.

RUBBING FELTS—*livre*

English Rubbing, ¼ in. thick, fine grain, in sheets,	18x18 in	per lb.	$2	40
London Rubbing, ½ in. " coarse " "	18x18 in	"	1	80
Ex. Fine Spanish ¼ in. " fine " "	18x18 in	"	2	40
Ex. Thick White Spanish, ½, ¾, 1, 1½, 2 in. "	18x18 in	"	2	40
" " Mexican, ½, ¾, 1 in. "	18x18 in	"	2	00
" Gray " 1 in. thick, "	18x18 in	"	1	80

Any size cut to order.

SHEEP MARKING INK—*livros*

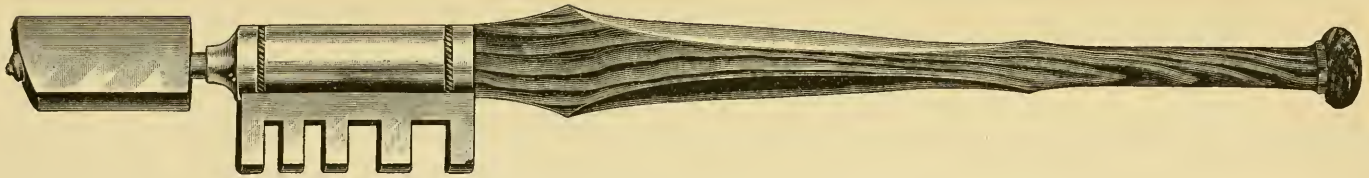

BLACK, RED AND BLUE

This is especially designed for the purpose. Makes a good, clear mark on the wool. Durable, but can be removed when wool is scoured. Non-poisonous. Put up in gallon pails ready for use.

Price per gallon $1 50

ROSEWOOD HANDLE—*locate*

Per doz.....$1 75

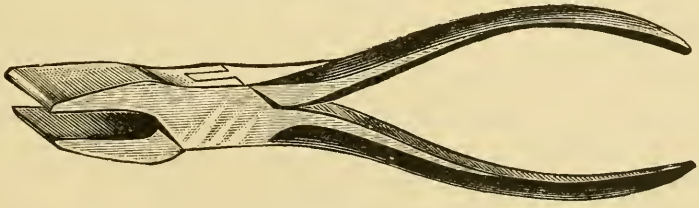

STEEL WHEEL PATENT ROTARY GLASS CUTTER—*lock*

A practical tool for cutting glass in circular shapes. The cutter disc contains six hardened steel wheels, which can be renewed as occasion demands.

Each.....$3 00

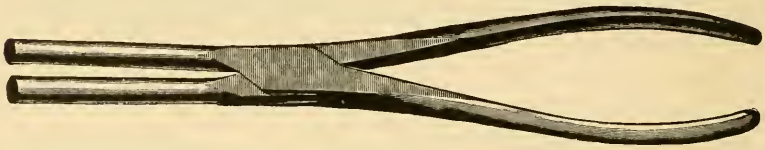

PLATE GLASS PLYERS

10 INCHES—*locker*

Each.....$1 50

PLATE GLASS ROLLERS

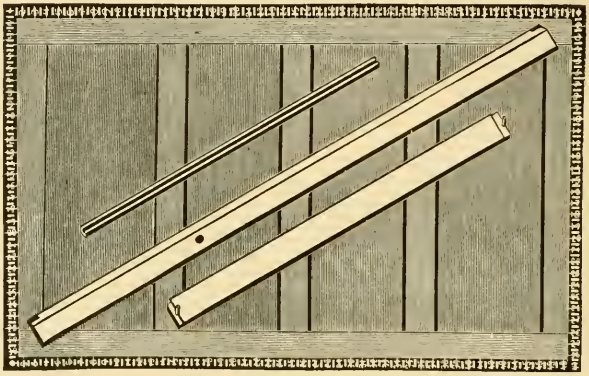

11 INCHES—*locket*

Each----------$1 50

POPULAR GLASS BOARD—*lockup*

(Patent Pending)

A FEW REASONS WHY YOU CANNOT AFFORD TO BE WITHOUT IT

1. Owing to its construction, it can neither warp, swell nor shrink, and must retain its original shape permanently.

2. The most inexperienced can cut glass with perfect accuracy, it being impossible for the straight-edge to slip while cutting.

3. Its illuminated numbers enable you to cut glass in the darkest spot of your store.

4. It makes glass-cutting a pleasure instead of a dread.

5. It is a perfect glass board that is offered at a popular price.

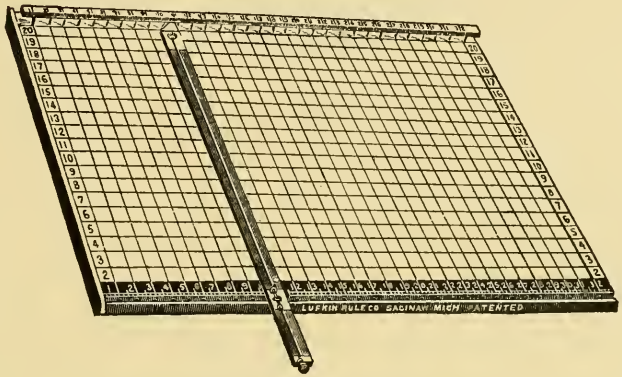

One size, 30x48 inches----------List, $9 00

NEW GLAZIERS' HAMMERS—*loco*

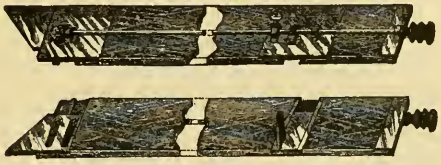

FOR DRIVING ZINC POINTS

The only perfect tool for the work. Price---------- $0 70

PERFECTION GLASS BOARDS

THE PERFECTION GLASS BOARD—*locust*

This board has many advantages. It is quickly adjusted, more so than any other. It is the only board with which the rule can be adjusted so as to cut eighths, quarters and halves of an inch, by merely turning a thumb nut at end of rule. The rule is held firmly at both ends, and when a number of lights are to be cut all the same size, every one will be alike. Our board should not be compared with the cheaper grade soft wood boards, ours being made of hard wood only and made to prevent warping.

Size of Board, 24x36--------each, $21 60	Size of Board, 42x60--------each, $35 00
" " 30x48-------- " 26 00	" " 48x72-------- " 39 00
" " 36x54-------- " 30 50

GLASS

PLATE GLASS

When and how "Glass" came to be discovered and manufactured we do not know. It was in use to some extent in Egypt two thousand years before the Christian Era; but for how much longer a period does not perhaps concern us.

The subject of immediate interest to us is "Plate Glass," and we know its history, for it dates back only a little over two hundred years.

It is to France that we are indebted for the crystal show-windows that ornament our thoroughfares, for the splendid mirrors that reflect the faces and forms of our beautiful women, and for the plate glass that shields our loved ones from the inclemency of the weather, and adds so much to the attractiveness and beauty of our homes.

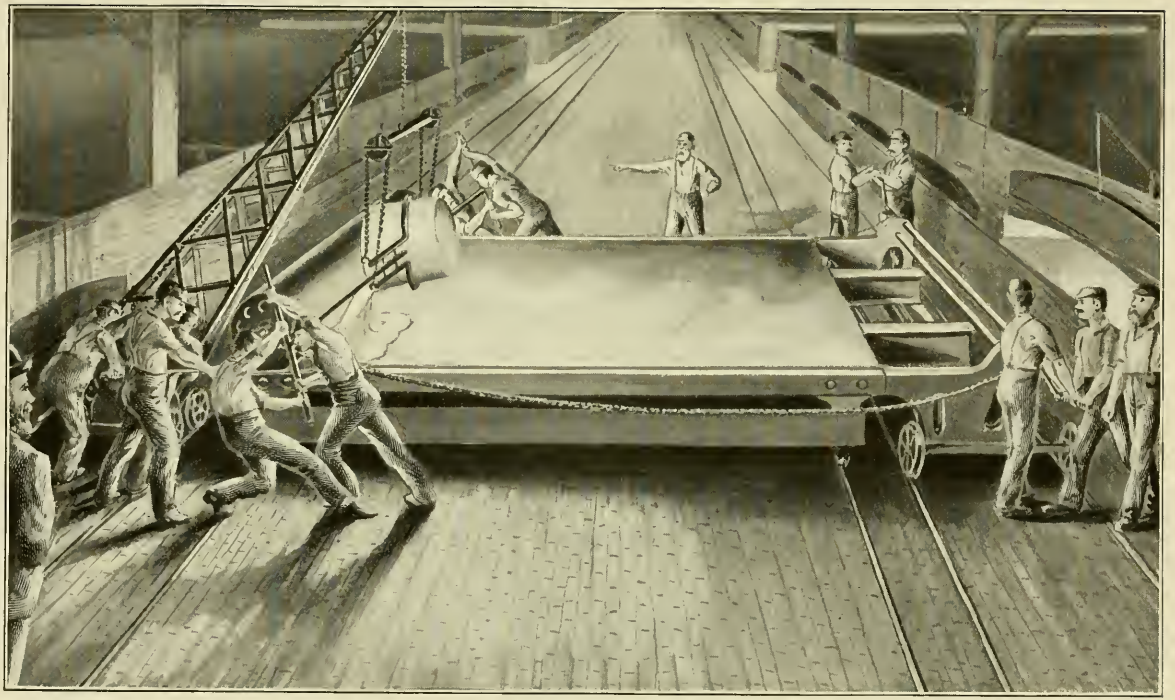

THE MAKING OF PLATE GLASS

We have often been asked, How is plate glass made, and what is it made of?

Answering these questions briefly, we have to say, first, that it is made of sand, soda, and lime, fused at a very high temperature into a double silicate which is called glass.

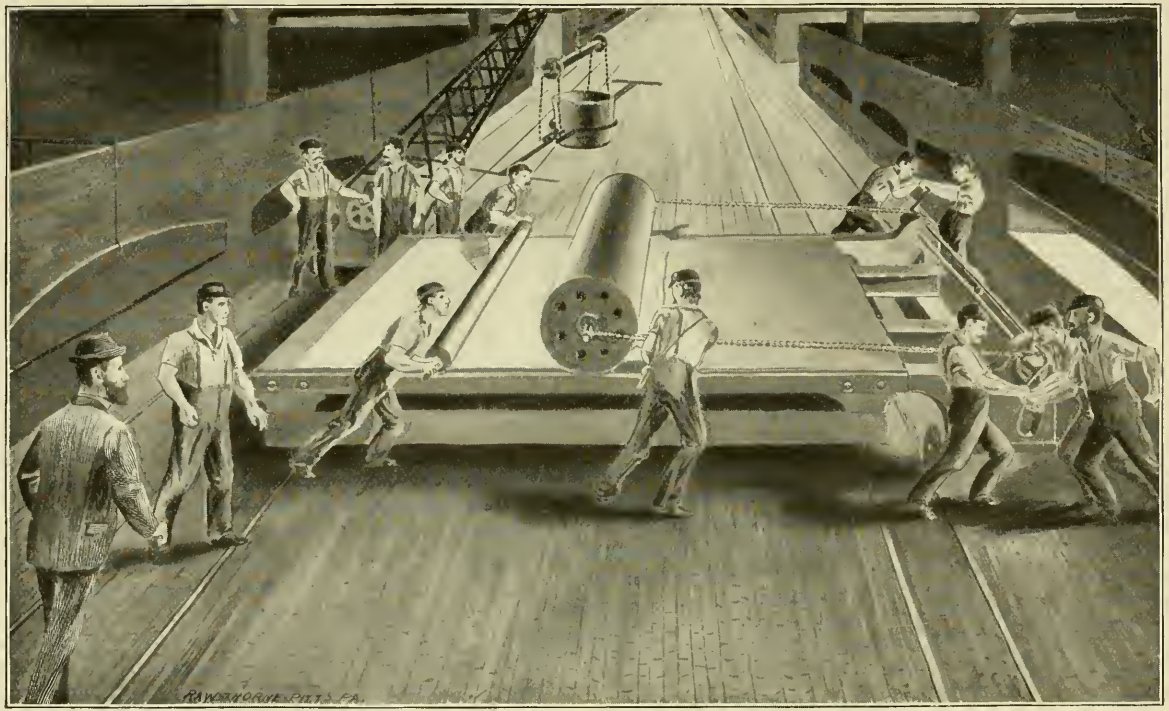

To answer how it is made we cannot do better than to give the description of casting plate glass as written by Mr. M. A. Cochin:

When one enters for the first time into one of the vast plate works at night, the furnaces are closed, and the dull sound of a violent though captive fire alone interrupts the silence. From time to time a workman opens the working hole to look into the furnace at the condition of the glass; long, bluish flames then light the sides of the annealing ovens, the blackened beams, the heavy casting tables, and the mattresses on which half-naked workmen quietly sleep. Suddenly the hour strikes; the call is beaten on the iron slabs which surround the furnace. The maneuvers begin with the activity and precision of an artillery movement. The furnaces are opened, the glowing pots are seized, drawn out, and raised into the air by mechanical means; they pass like hanging globes of fire along the beams, then stop, and are lowered over the immense cast-iron table, placed with its roller before the open mouth of the annealing oven. The signal given, the pot is inclined quickly and the beautiful opal liquid, brilliant, transparent, and unctuous, falls and spreads over the table like ductile wax.

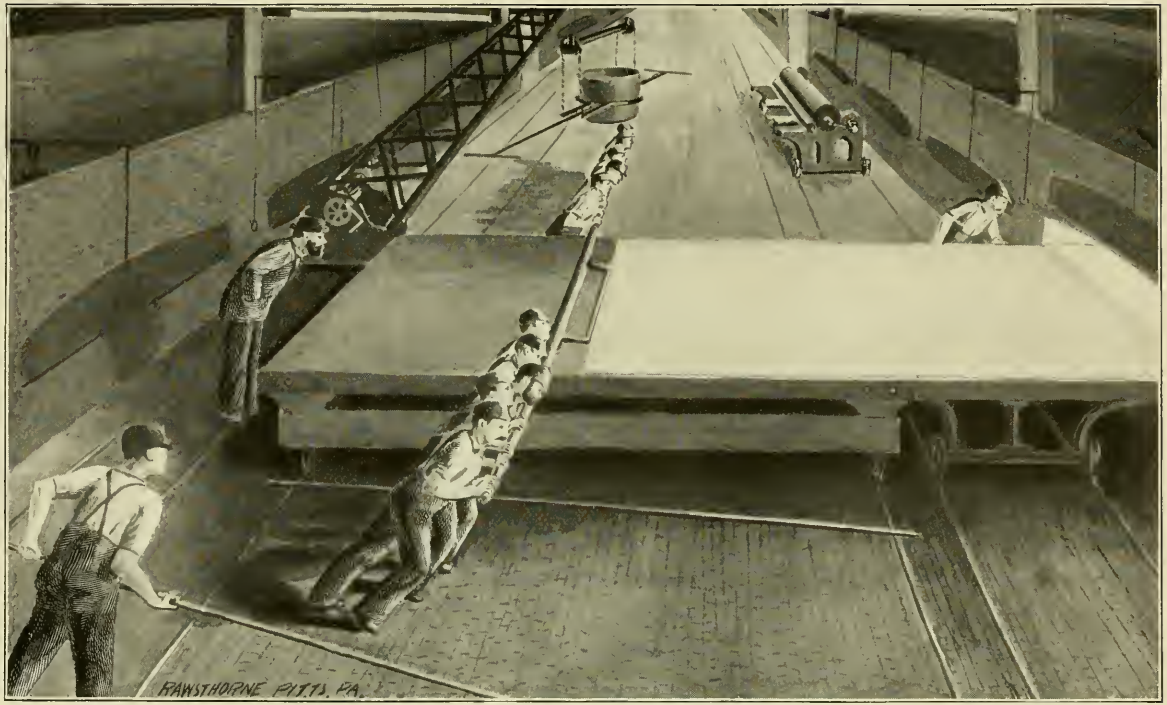

CASTING PLATE GLASS

At a second signal the roller passes over the red and paste-like glass; a workman, with his eyes fixed on the fiery substance, skims off all apparent defects with bold and skillful hand; then the roller falls and passes off.

ROLLING PLATE GLASS

And now twenty workmen, provided with suitable tools, quickly push the glass into the oven, where it is annealed by slowly cooling. The workmen then return the emptied pot to the furnace and begin again, without disorder, without noise, without rest, until all the pots of the furnace have been cast. The pots are refilled, the furnace reclosed, darkness again falls, and the continuous noise of the fire preparing fresh work is again the only sound heard.

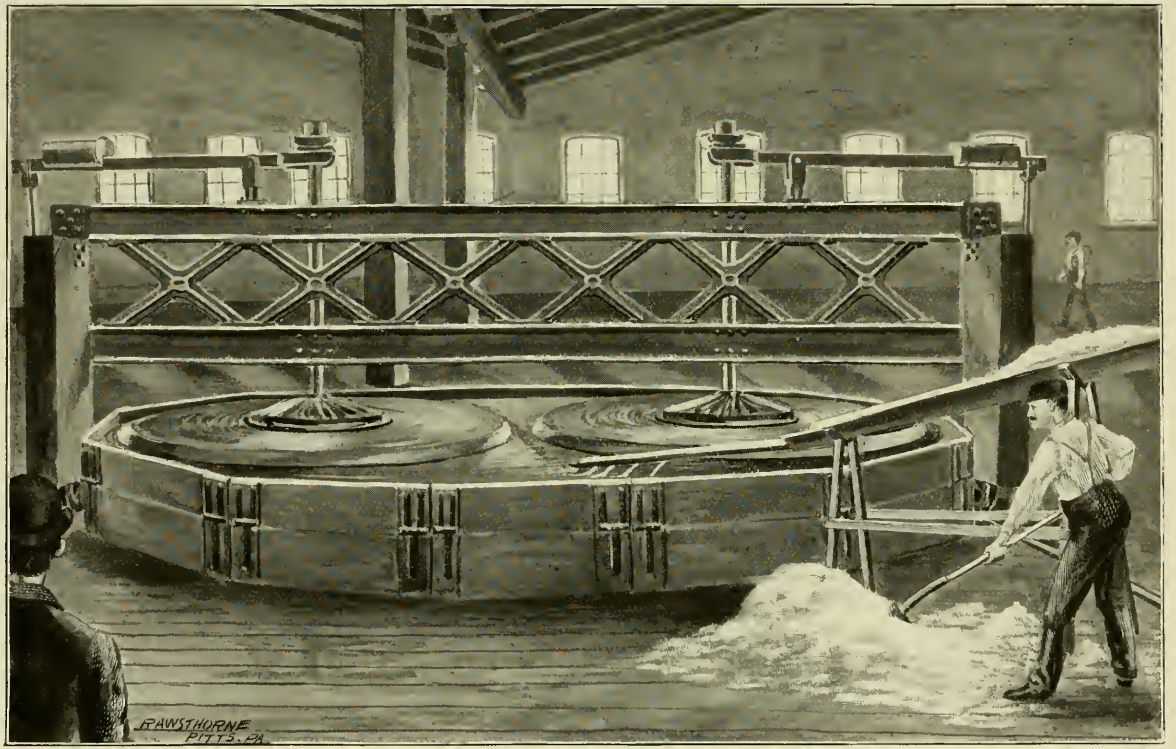

STORING THE HOT-ROLLED PLATE

The process of taking it out of the ovens is less dramatic than the casting. And yet it is striking to see twelve workmen, with no other help than leather straps, raise and carry this large, thin, and fragile glass upon its edge, walking in step, like drilled soldiers, from the annealing ovens to the racks, where it is now ready for the next process—the grinding and smoothing.

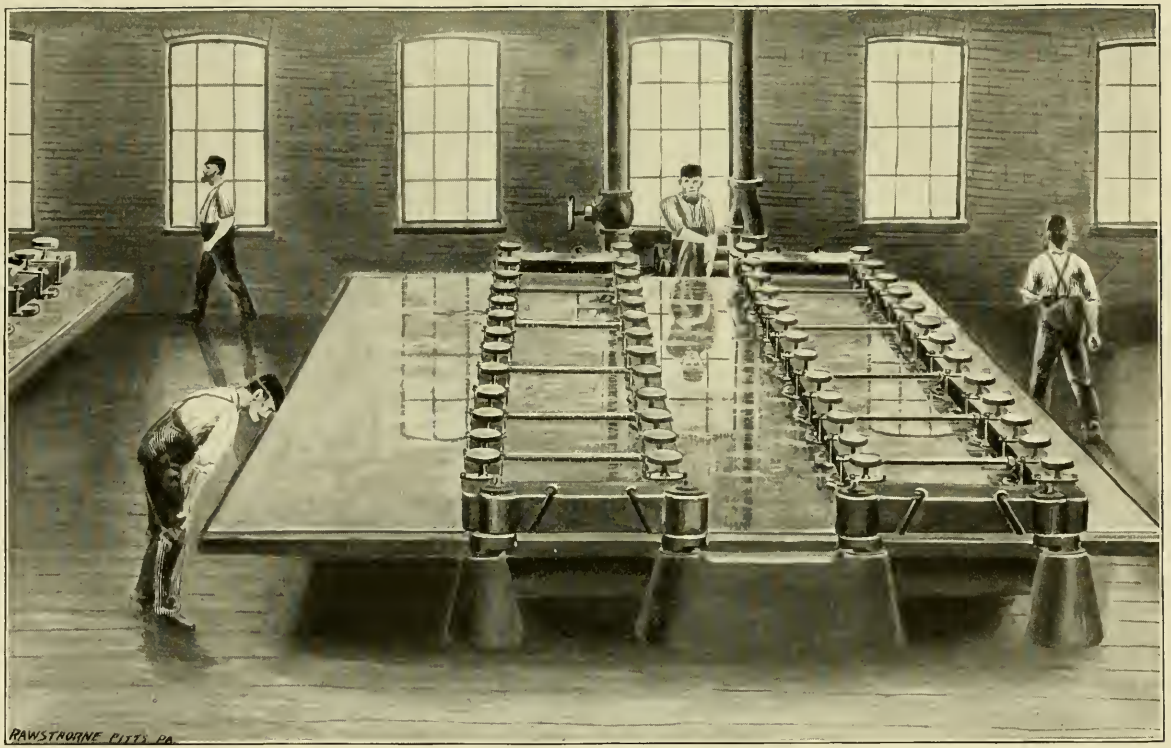

CARRYING ROUGH PLATE GLASS

The glass is now rough and opaque, and must undergo the different processes of grinding and smoothing to bring the surfaces to a perfect plane, and give it that satin-like finish that is so necessary to its successful polishing. The grinding is done by the use of successive grades of sand, beginning with the very coarsest, and following grade by grade down to the very finest grain. The smoothing is then completed by following, in a similar manner, with emery, carefully graded.

GRINDING THE ROUGH PLATE GLASS

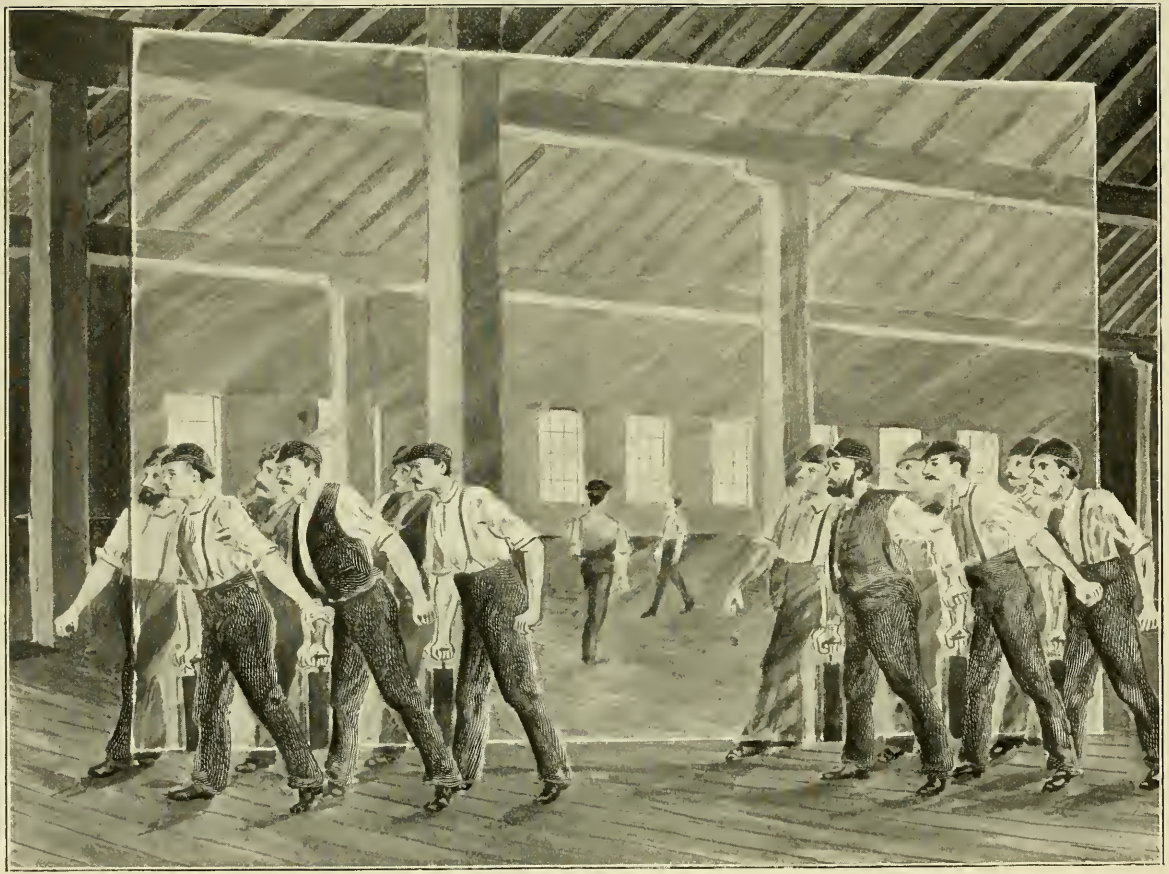

The glass is still opaque and must be polished to make it transparent. The polishing is one of the most delicate processes in the manufacture, for, as it has to transmit or reflect light, there must be no defect in it to disperse or obscure the rays.

POLISHING THE GROUND AND SMOOTH PLATE GLASS

By this mechanical work the glass loses at least one-third of its weight. A glass works producing a million square feet of finished plate glass annually would make about six million pounds of rough plate, and this, when finished, would only weigh three million five hundred thousand pounds, showing a loss in actual glass of two million five hundred thousand pounds, which passes off in the debris to the river.

When we add to this the fact that about one-half of the weight of the lime and soda originally used to produce this glass, released by heat, escapes into the atmosphere in the shape of carbonic and sulphuric acid, one may get some idea of the vast waste of material and the consequent cost of converting such homely substances as sand, soda and limestone into so beautiful an article as plate glass.

CARRYING THE FINISHED PLATE

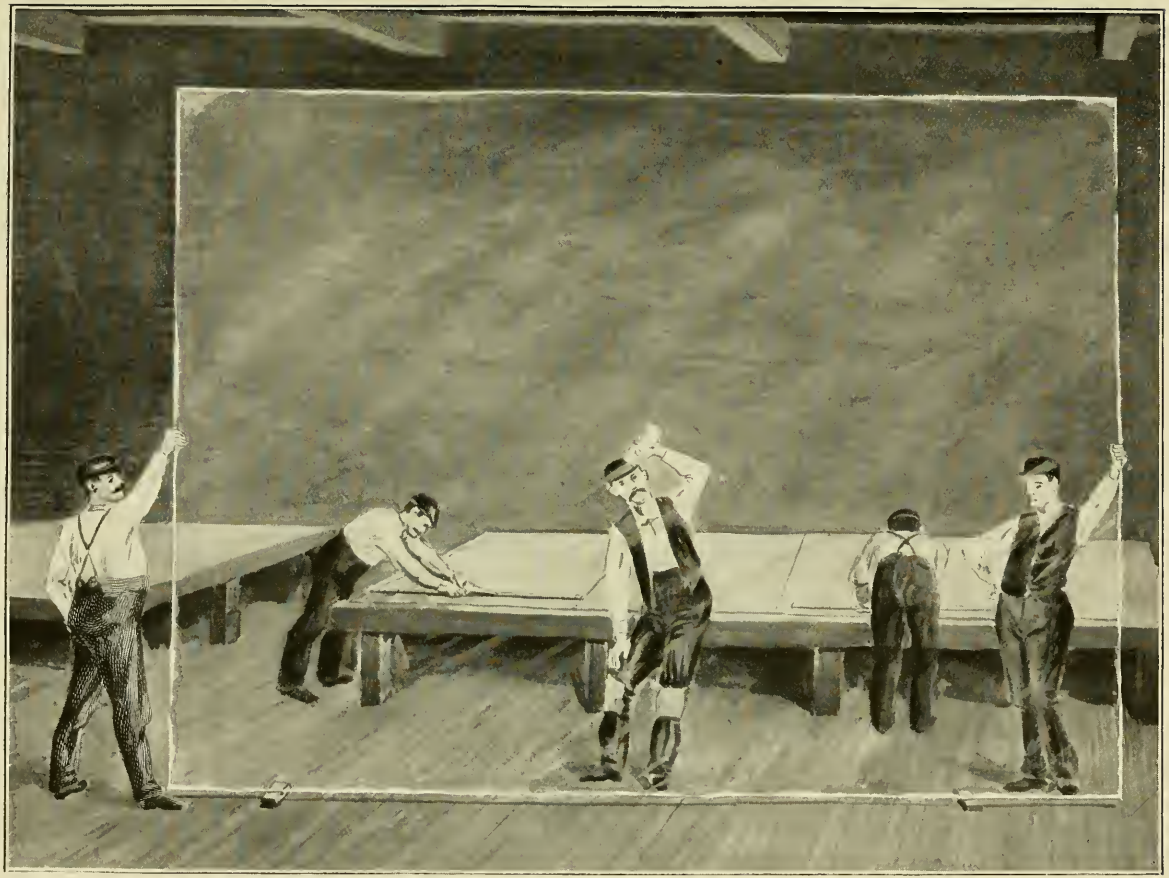

And now a word as to the general idea of the costliness of plate glass. Only a few years ago it was looked upon as a great luxury in which none but the wealthiest could indulge. But now the point has been reached where it has become a necessity; where anyone who is able to build a home, however humble, can well afford to use plate glass for its windows. Nothing so adorns the beauty of a home nor gives so great delight to its possessor, or adds so much to its value, at so slight a cost, as plate glass.

It is our natural desire to interest you in plate glass; to point out its merits and its beauty.

If you contemplate building a home, we would convince you of the advantages that you will acquire by using plate glass instead of common window glass.

If you already have a home, and it is disfigured by common window glass, we wish to show you how richly rewarded you will be in increased comfort and enjoyment, as well as the value you will add to your home by substituting plate glass for the obsolete and imperfect window glass.

Nothing but the diamond is so limpid as good plate glass.

EXAMINING THE FINISHED PLATE FOR DEFECTS AND CUTTING PLATE GLASS

ONE WAY

is to use common window glass, which is usually streaked, smoked, and stained, and full of minute air bubbles. Objects seen through it become deformed and distorted. When sunshine falls upon it, it has the appearance of the battered bottom of a tin pan. It never looks clean, no matter how carefully it is washed and dried.

THE OTHER WAY

is to use plate glass, which glistens like a mirror, and reflects like one. Objects seen through it are sharp and clean cut. It has no imperfections, no air bubbles, no wavy effects. There is no trouble about cleaning it, and when cleaned it keeps clean a long time.

TWO
WAYS
OF LOOKING AT IT.

Plate glass keeps a house warmer in winter and cooler in summer.

It adds to the beauty both within and without.

It is a source of constant delight because so easily kept clean.

It gives additional value to your home far beyond any cost it may have been to you.

When you look through a plate glass window the view is clear, distinct, and perfect. If you look at the plate glass window from the outside, in the shade it reflects like a mirror "The Passing Show"; or, if you are so fortunate as to have your home in the country, it mirrors the landscape like a framed picture—because plate glass is mirror glass.

PLATE GLASS IN A HOUSE

Lifts its outside tone just as pictures and rugs and fine furniture lift the inside tone. Plate glass does more. It helps the inside of the house more because it is in keeping with all the accessories that refinement calls for. It brings a refining influence of its own, and helps every other feature of the house to be more elegant. It lets daylight into rooms freed from all discordancies—sublimated daylight, as it were.

Children are healthier, plants are healthier, the whole household is healthier and happier for these crystal-clear sheets in the windows.

No dollars can be put into a house that will count so much for real luxury and lasting delight as those that pay for plate glass.

Even when the cost of plate glass was vastly greater than its present price there would have been real economy in its use.

But now, with electric lights crowding gas, as gas not long ago was crowding lamps and candles; with new opportunities for house beautifying and embellishment springing up on every hand; with the spirit of the age calling for everything that will make the home and its surroundings more elegant and more artistic, *not* to make free use of plate glass in the windows is as absurd as it would be to cling to eight-cent wall paper because fresco and mural paintings are more expensive. It is *more* absurd, for plate glass brings light and life, as well as beauty.

The cost of plate glass is much less than a few years ago. It is still more expensive, square foot for square foot, than sheet glass,

but on even a house costing no more than $1,500, it can be used with positive profit to the owner should he care to sell—the extra outlay being more than offset by the increased beauty and market value of the house.

POLISHED PLATE GLASS

We manufacture and always keep in stock plates of all sizes from the smallest to the very largest made.

We wish to make special mention of the fact that every light of genuine Pittsburgh plate glass bears the company's label, and our own special trade-mark. The trade-mark is an Eagle, and surrounding the Eagle is printed "Pittsburgh Plate Glass Company."

Our company is owner of ten of the largest plate glass factories in America, and our enormous output places us in a position to select plates that are peculiarly fitted to every use. Orders for plate glass can be filled more advantageously through our company than any other source.

We can furnish you plate glass of any size or thickness.

We can furnish it beveled, bent or silvered.

Write to us for prices of any list of sizes you may require.

We have our own warehouses in New York, Boston, Philadelphia, Pittsburgh, Buffalo, Cleveland, Cincinnati, Detroit, Chicago, Milwaukee, St. Louis, Davenport, Ia., Minneapolis, St. Paul, Omaha, where we keep large stocks constantly on hand.

Write to the nearest one and you will get a prompt reply.

AMERICAN WINDOW GLASS

While it is generally well known that the Pittsburgh Plate Glass Company are the largest manufacturers of plate glass in the world, it is not so well known that they are also the largest jobbers of window glass, mirrors, rough, ribbed and ornamental glass of all kinds. This is because the jobbing business has been of a more recent growth.

We buy about one-third of the window glass produced in the United States, outside of New Jersey, and take the entire output of several of the more modern tanks. Our large buying capacity enables us to make prompt shipments and to furnish the best obtainable brands; we are glad at all times to give our customers the benefit of our opinions on the market, and we have been of much service to our friends in this manner. For the convenience of the trade, we carry a large and complete stock of window glass at all our various branches.

FRENCH PICTURE GLASS

Our Foreign Department is under the charge of Mr. Richard Melchers, and we have our own resident agent at Charleroi, Belgium, which gives us a decided advantage in direct importations. Also, we are exclusive agents for Louis Lambert's well-known brand of glass, which is especially adapted for fine trade, and is in demand by picture framers.

GREENHOUSE GLASS

We make a specialty of glass for green-house purposes, and are at all times ready to make prompt and low quotations for present or future deliveries. All inquiries addressed to our nearest warehouse will receive immediate and courteous attention.

We have our own sand blast, beveling and silvering plants, and at several of our branches manufacture leaded art glass.

SPECIAL PRICES

There are many times during the year when we are able to name special prices on certain excess sizes of stock. We particularly solicit inquiries for orders of this character where the glass is desired for special purposes, or where the customer contemplates putting in a larger stock than usual.

MIRRORS

In the year 625 Pope Boniface IV sent from Rome to the good and beautiful Queen Ethelberga, wife of Edwin of Northumbria, a present of a mirror.

Ten and a half centuries later, or in 1673, Colbert, Minister of Finance to Louis XIV, replying to a proposal from Italy to manufacture large mirrors in France, said: "There would be absolutely no sale for large mirrors in the kingdom; there would be no one but the King who would have any use for them." So slowly during the long sleep of the middle ages did the world advance in the elegancies and comforts of life.

Two hundred years after Colbert's time the mirror was to be found not merely in kings' palaces, but in the humblest homes of all the world.

"The truest mirror, that an honest wife
Can see her beauty in."

The Honeymoon, Act III. Scene 4.

POLISHED PLATE MIRRORS—*tocsin*

This Trade-Mark is a guaranty of excellence of quality.

Our plants for the manufacture of plain and beveled mirrors are the most extensive in this country. Our New York plant alone, which has been increased during the last three years, now stands second to none in size. We also have plants in the cities of Philadelphia, Boston, Cincinnati, Minneapolis and Davenport, which have been put up for the accommodation of the trade in their respective territories, with the view of serving our friends promptly and well for all their requirements, regardless of size or pattern.

All our plants are fitted with the most improved machinery, and we are able to bevel plates of the largest dimensions.

We are using the celebrated "Durand Process" of silvering, which has stood the test of years, and is acknowledged to be of the highest standard of excellence, as well as most durable. By reason of this process, people who use our plates have no complaints to make about spotted or clouded mirrors. Our patrons thus avoid the disagreeble necessity of returning them on account of defects or faults. Furniture manufacturers appreciate merits of this sort.

AMERICAN BEAUTY MIRRORS—*toddy*

Our A. B. Trade-Mark.

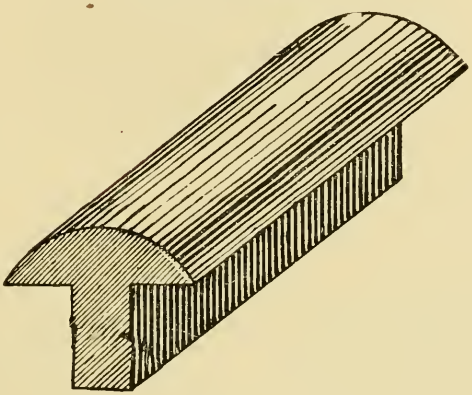

Our "American Beauty" Mirror Plates are manufactured to compete with German looking-glass plates, and are better than the Germans in every way. They are silvered by the same process as that which we use for our higher grades of plates; which is a guaranty of their excellence. They are rapidly displacing the ordinary German looking-glass plates in the market.

The prices of "American Beauty" plates are about the same as the Germans, but the furniture manufacturers are able to

appreciate the superior advantages of our plates. The glass, for example, is more than twice as thick as the German, and the bevel being flat, is therefore not distorting.

In our process of manufacture we are able to make plates of almost any pattern. This fact, of itself, makes these plates desirable to the furniture manufacturer, because it enables him to secure a variety of patterns for the cheaper grades of furniture.

SASH BARS.

SIZES

IRON		NICKEL	
1 inch wide	*todis*	1 inch wide	*toft*
1¼ " "	*toe*	1¼ " "	*tofus*
1½ " "	*toff*	1½ " "	*toffy*

These bars are made of iron and combine the valuable features of great strength and lightness of appearance. They are made in either iron or nickel plate. We recommend the use of nickeled bars because they so vastly improve the appearance and finish of the front. The iron bars are equally strong, and with a japanned finish look very well. The bars are made in widths of from 1 to 1½ inches, in both nickel and iron finish. All orders shipped with promptness.

Please Write for Estimates.

WIRE AND ORNAMENTAL GLASS IN ROUGH, RIBBED, AND MAZE STYLES

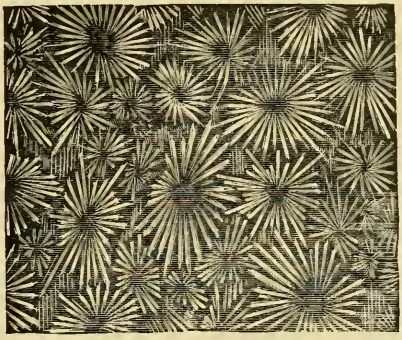

WIRE GLASS—*toggle*

The "Solid" Wire Glass is officially approved, after tests, by the boards of fire insurance underwriters of the principal cities of the United States, and found acceptable for its superior manufacture, and its fire retardant quality, subject to their rules.

Wire Glass is now in extensive use for warehouse windows, in approved iron frames in lieu of iron fire shutters; skylights of train sheds, and for general skylight purposes; lights in elevator shafts; partitions, office, and jail lights; windows of machine shops and roundhouses; cellar and bulkhead windows.

Wire Glass is made in Rough, Ribbed, and Maze styles. Special attention is directed to Ribbed and Maze Wire Glass, which diffuses light in a greater degree than plain glass, in ¼ and ⅜ inch thicknesses. The ¼-inch thickness is the standard, acceptable for fireproof windows. Stock sheets 14 to 40 inches wide, by 50 to 100 inches long. Not recommended to be used any larger than 24x72.

WIRE AND ORNAMENTAL GLASS

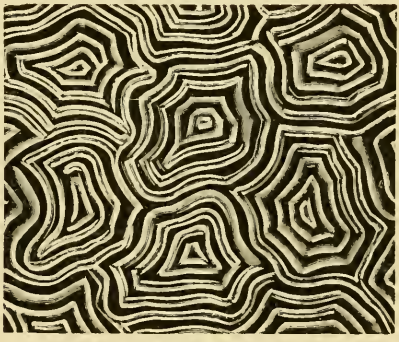

PATENT FLORENTINE—*toga*

⅛ and $\frac{3}{16}$ inches thicknesses, up to 42 inches wide.
⅛-inch *thin*, very effective in leaded work.

PATENT MAZE—*toilet*

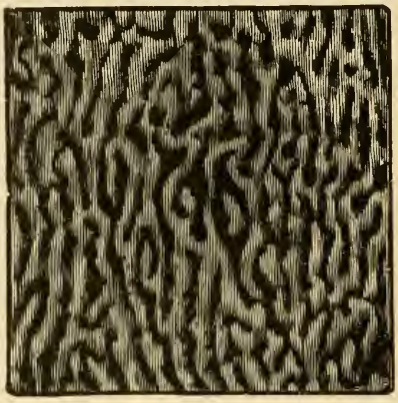

FIGURED No. 2—*toilful*
Mississippi Glass Company.

⅛ and $\frac{3}{16}$ inches thicknesses, up to 42 inches wide.

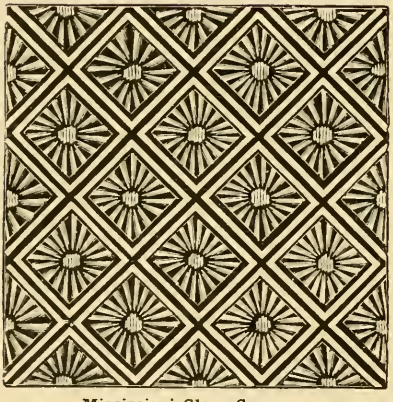

The above white-figured glass is specially adapted for doors, transoms, panels and windows, in all places where privacy is desired. It also increases the diffusion of light. Now generally used in finest modern buildings. This glass has a wide reputation for having an exceptionally smooth cutting surface, is brilliant, easily kept clean, and artistic in design.

WIRE AND ORNAMENTAL GLASS

PATENT ONDOYANT—*toilsome*

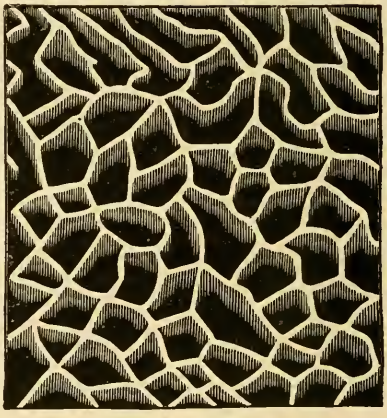

⅛-inch thick, 30 inches wide.

Mississippi Glass Company.

FIGURED No. 1—*tokay*

⅛ and $\frac{3}{16}$ inch thicknesses, up to 42 inches wide. For doors, partitions and transoms.

PATENT VENETIAN—*token*

⅛-inch thick, 30 inches wide.

Patent Ondoyant and Venetian Glass, well known and popular designs in figured glass, are made in ⅛-inch *thin* thickness, 30 inches wide, and are largely used in *leaded work* and for small sash lights.

WIRE AND ORNAMENTAL GLASS

FIGURED No. 3 WHITE—*tolerate*

Mississippi Glass Co.

⅛ and $\frac{3}{16}$ inch thicknesses, up to 42 inches wide.

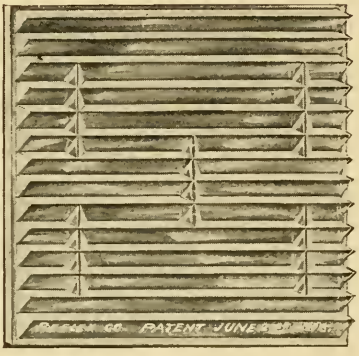

While the above design obstructs the vision, it freely admits the light. Color and brilliancy of surface unexcelled.

ROUGH AND RIBBED PLATE GLASS

Made in ⅛, $\frac{3}{16}$, ¼, and ⅜ inch thicknesses.
Stock sheets 14 to 42 inches wide, by 50 to 110 inches long.

Please Write for Estimates.

PRISM GLASS—*toltec*

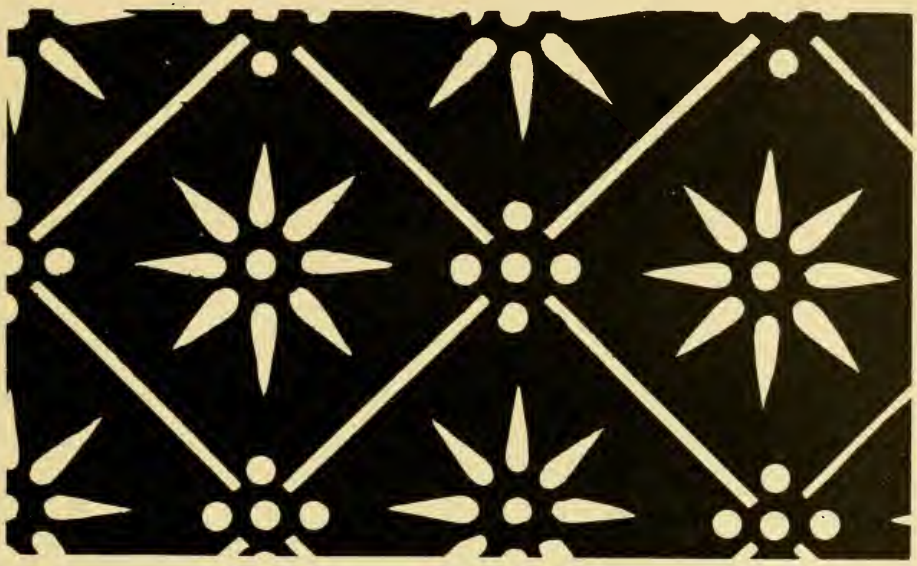

SPREADS LIGHT IN DARK PLACES.

What is Prismatic Glass?

It is an arrangement of sections of clear glass, having one side smooth and the inner side grooved deeply into prisms. The rays of light, upon entering through the window, are thus bent and deflected into all parts of the room.

STAINED GLASS

LEADED ART GLASS WORK

The following pages present many styles and grades of Art Glass. By producing them in colors, we are able to give some idea of how the finished work will look; although it is never possible to do full justice to this class of work in a printed page.

We have capable artists in our employ, and we can always furnish leaded glass work of the highest artistic excellence. We are ready at all times to submit special water-color sketches for art glass, when desired.

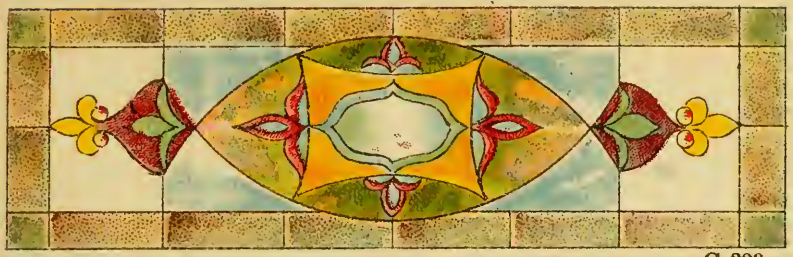

We make a specialty of church work, and when designing church memorial windows we are always glad to introduce such inscriptions, designs, or emblems as may be suggested to us. Whenever it is desired to introduce figures and faces painted in fusible colors, we can insure the carrying out of the work in a manner as creditable to the purchaser as to the artist.

We furnish sash for art glass at low prices. We make no charge for glazing art glass ordered from us; and when customers desire to send their own sash to us at our factory, we will make and insert the art glass without any charge for glazing. There is less risk of breakage when glass is shipped set in the sash.

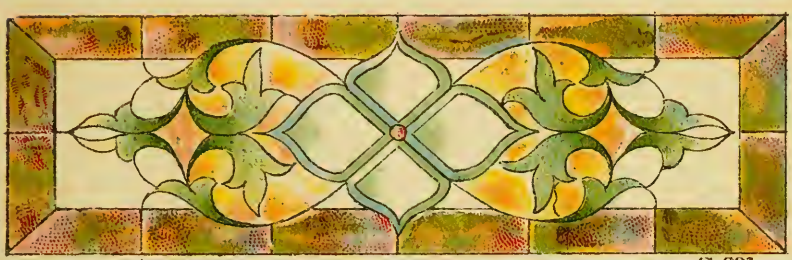

VENTILATORS

We make our ventilating frames of galvanized iron, and can insert ventilators in ordinary frames or in irregular shapes.

When writing for special designs or sketches for art glass, kindly give us the sizes and shapes of the openings, and also state about what price is to be paid for the glass. We make no charge for the special designs, but we expect them to be returned to us.
